### 3 Future projects

1 Read the article about a new train tunnel. Complete the specification chart.

#### The Gotthard Base Tunnel

The Gotthard Base Tunnel (GBT) will be the longest railway tunnel in the world. Engineers are building it now, in Switzerland, under the Alps. They will finish the project in 2016–2017.

Today, many trucks use the roads over the Alps. In future, they will use the GBT. The tunnel will connect Zurich in Switzerland with Milan in Italy.

There will be two tunnels. Each tunnel will be about 57 km long. They will run about 600 metres below the old St Gotthard railway tunnel (completed in 1881).

The new trains will use electricity. Some trains will carry trucks and cars. Fast passenger trains will travel at 250 kph. About 200–250 trains per day will use the GBT.

2 Complete the safety report with the correct form of the verbs in brackets.

### Moderna Shipyard

On 31st May, I (1) \_\_\_\_\_ (inspect) the Moderna shipyard. I (2) \_\_\_\_\_ (find) a number of safety hazards. There (3) \_\_\_\_\_ (be) some tools on the ground. There (4) \_\_\_\_\_ (be) some wire coiled outside the office. Eight of the workers (5) \_\_\_\_\_ (not have) hard hats. There (6) \_\_\_\_\_ (be) no safety signs.

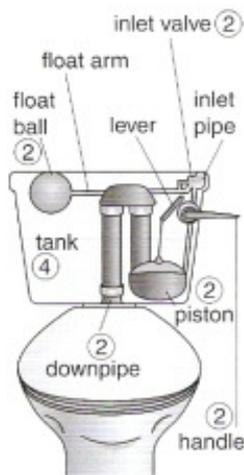

In April, there (7) \_\_\_\_\_ (be) a serious incident in the shipyard. Two ships (8) \_\_\_\_\_ (be) in the shipyard. A crane (9) \_\_\_\_\_ (lift) a metal beam from one of the ships into the air. But there (10) \_\_\_\_\_ (be) no rope attached to the beam. The beam (11) \_\_\_\_\_ (come) downwards. But it (12) \_\_\_\_\_ (move) in the air and (13) \_\_\_\_\_ (hit) a forklift truck. The top of the forklift truck (14) \_\_\_\_\_ (be) bent. The driver was lucky. Just before the accident, another worker (15) \_\_\_\_\_ (shout), 'Mind your head!' The driver of the forklift truck (16) \_\_\_\_\_ (see) the beam and he (17) \_\_\_\_\_ (not be) hurt.

3 Write questions for these answers about the incident in question 2.

- 1 Q: (Where / incident) *Where did the incident happen?*  
A: It happened in the shipyard.
- 2 Q: (When / take place) \_\_\_\_\_  
A: It took place in April.
- 3 Q: (take place / on a ship) \_\_\_\_\_  
A: No. It took place near a ship, under a crane.

- 5 Q: (rope / attached / to the beam) \_\_\_\_\_  
A: No, there wasn't.
- 6 Q: (beam / hit / worker) \_\_\_\_\_  
A: No. It hit his forklift truck.
- 7 Q: (worker / hurt) \_\_\_\_\_  
A: No, he wasn't hurt.

## 1 Pistons and valves

- 1 Complete the description of a flush toilet with words from the diagrams. Some words are used more than once, e.g. tank (4 times).

Pull the (1) *handle* down. A (2) \_\_\_\_\_ inside the tank pulls the (3) \_\_\_\_\_ up. This forces water out of the (4) \_\_\_\_\_ through the (5) \_\_\_\_\_.

When you release the (6) \_\_\_\_\_, the (7) \_\_\_\_\_ drops back into its place at the bottom of the tank. All the water flows out of the tank through the (8) \_\_\_\_\_.

There is a float ball inside the tank. It is attached to the end of the float arm. The ball makes the arm rotate vertically. The (9) \_\_\_\_\_ sinks to the bottom of the empty (10) \_\_\_\_\_. The (11) \_\_\_\_\_ rotates and opens the (12) \_\_\_\_\_. This lets water flow through the inlet pipe into the tank. The water level in the (13) \_\_\_\_\_ rises. The (14) \_\_\_\_\_ at the end of the arm rises too.

The tank fills with water. The end of the float arm now presses against the (15) \_\_\_\_\_ and closes it. This stops water from flowing into the (16) \_\_\_\_\_ through the (17) \_\_\_\_\_.

- 2 Tick the correct forms for the verbs.

	... it do	... it to do	... it from doing
allow		✓	
cause			
let / make			
prevent / stop			

- 3 Rewrite these sentences to give similar meanings. Replace the verbs in italics with the correct form of the verbs in brackets.

- The pump *makes* the water flow along the pipes. (cause)  
*The pump causes* \_\_\_\_\_
- The valves *allow* air to enter the tyres. (let)  
\_\_\_\_\_
- The valves *don't let* air escape from the tyres. (prevent)  
\_\_\_\_\_
- The sun *causes* the solar panel to heat the water. (make)  
\_\_\_\_\_
- The cooling system *doesn't allow* the engine to get very hot. (stop)  
\_\_\_\_\_
- The closed inlet valve *prevents* the water from flowing out. (not allow)  
\_\_\_\_\_

## 2 Switches and relays

- 1 Complete the description of a circuit breaker with words from the diagrams. Some words are used more than once, e.g. switch (3 times).

A circuit breaker has a (1) *switch* on the outside of the box. You can turn this on or off. When the (2) \_\_\_\_\_ is up (on), electricity flows into the circuit breaker through the bottom (3) \_\_\_\_\_. It flows through the (4) \_\_\_\_\_. It then flows up to the (5) \_\_\_\_\_ and across to the (6) \_\_\_\_\_. Then the electricity flows out of the circuit breaker at the top (7) \_\_\_\_\_.

If the electrical current jumps to a dangerous level, the electromagnet pulls down a (8) \_\_\_\_\_. This pulls the (9) \_\_\_\_\_ away from the (10) \_\_\_\_\_. This breaks the circuit. At the same time, the (11) \_\_\_\_\_ drops to the 'down' position. The electricity is now shut off.

- 2 Read the three texts in question 3. Write the titles above the texts.  
 a) Emergency exit    b) Home security    c) Car security
- 3 Read the texts and mark the sentences 'True' (T) or 'False' (F). Correct the false parts of the sentences.

1 \_\_\_\_\_

This security system uses a metal ball inside a metal pipe. When the ball remains still, it touches two of the electrical contacts. This completes the electrical circuit. If the ball moves, it breaks the circuit and opens a switch. If somebody makes the car move, the system causes the horn to sound. It makes the car lights go on too. If somebody hits the car a few times, it makes the siren sound.

2 \_\_\_\_\_

The ExitGuard is mounted over the door handle. It has a battery-operated alarm. When somebody breaks open the ExitGuard, this causes the alarm to sound. The ExitGuard allows shops to secure their emergency exits. This stops people from using the exits to enter the shop. But it lets people leave the shop in an emergency.

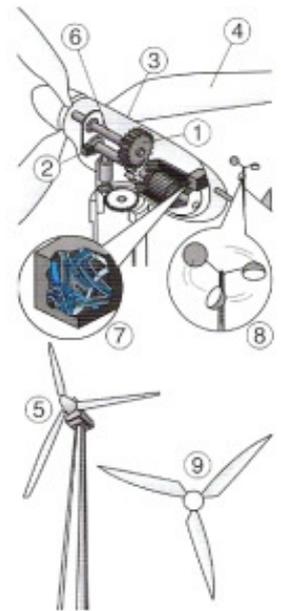

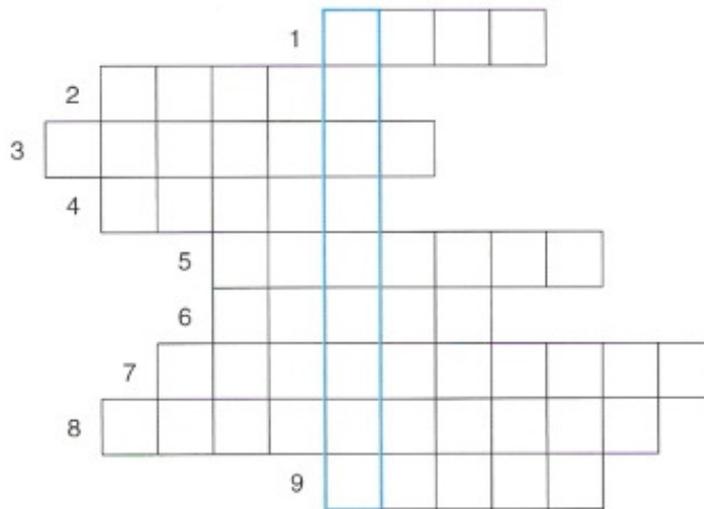

3 \_\_\_\_\_

If you keep expensive equipment in your workshop, fit a burglar alarm. When the doors and windows of the workshop are shut, the electrical switches are closed. This allows electricity to flow around the electrical circuit. If a burglar forces open a window, this breaks the circuit. This causes the burglar alarm to sound. If your workshop is a long distance away, install the alarm buzzer inside your house. This allows you to hear the alarm when you are inside your house.

- 1 Two of the systems cause an alarm to sound. *F Three*
- 2 The car security system works when somebody moves the car.
- 3 The ExitGuard works when somebody touches the door.
- 4 If there is a fire in a store, people can break open the ExitGuard.
- 5 The burglar alarm works only on the windows.
- 6 If the electrical circuit is broken, the burglar alarm will sound.
